## NEET Coaching Website — Project Summary & Ongoing Cost Guide

[successcodeacademy.in](https://successcodeacademy.in)

### 1. What Has Been Built

---

Success Code Academy's website has been designed as a complete, modern platform for a NEET coaching institute — built to attract students and parents, showcase results, and convert visitors into enrolled students and scholarship applicants.

#### 1.1 How the website is built (in simple terms)

The system is split into three connected parts, so it is fast, secure, and easy to expand in future:

- **Website** (what visitors see) — built with Next.js, a modern framework that makes pages load quickly and rank well on Google.
- **Server** (the engine behind the scenes) — handles enquiries, logins, payments, and content updates securely.
- **Database & File Storage** — stores all student records, course information, results, images, and documents safely, with automatic backups available.

| Component          | What It Does                                                   | Technology Used              |
|--------------------|----------------------------------------------------------------|------------------------------|
| Website (Frontend) | Everything a student or parent sees and clicks on              | Next.js, React, Tailwind CSS |
| Server (Backend)   | Processes forms, logins, payments, and admin actions securely  | Node.js, Express             |
| Database           | Stores courses, leads, student records, results, test data     | Supabase (PostgreSQL)        |
| File Storage       | Stores images, brochures, PDFs, study material, gallery photos | Supabase Storage             |

#### 1.2 Key sections of the website

The website has been planned and built page-by-page to guide a visiting parent or student from “just browsing” to “enrolled student,” covering:

- **Home Page** — banner, top NEET results, announcements, and quick callback/enrolment buttons.
- **Courses** — NEET 11th, NEET 12th, Repeater, and Foundation courses, each with fees, batch dates, and an “Enroll Now” option.
- **Scholarships** — scholarship exam details, eligibility, rewards, and an online registration flow.
- **Test Series** — mock tests and full test series with results, analytics, and purchase options.
- **Student Hub** — NEET answer keys, NCERT solutions, Success Code Academy G-Books, and study material.

- **Results / Toppers** — a dedicated page to showcase AIIMS/NEET rankers and build trust.
- Blogs, Reviews, Gallery, About Us, Contact/Callback, and FAQs.
- **Admin Dashboard & Visual Website Editor** — lets your staff update banners, announcements, toppers, results, and site details directly, without needing a developer (see the separate Admin Guide).
- **Student Login Portal** — a secure dashboard for enrolled students to access test results, purchased material, and downloads.

### 1.3 Security & reliability built in

- Admin logins are protected and sessions expire automatically for safety.
- Role-based access — staff only see and edit what they're permitted to.
- Payment transactions are verified before granting access to paid content.
- All uploaded files are checked before being accepted, and secrets/keys are never exposed publicly.

## 2. Monthly Hosting & Maintenance Cost

To stay online, the website depends on three outside service providers. These are industry-standard, pay-monthly services — there is no separate “developer fee” built into these numbers, only what the providers themselves charge to keep the site running.

### 2.1 Recommended plans for a live, public website

| Service  | Role                                                                    | Recommended Plan                                                      | Cost (USD)   | Approx. Cost (INR)* |
|----------|-------------------------------------------------------------------------|-----------------------------------------------------------------------|--------------|---------------------|
| Vercel   | Hosts the website pages visitors see (frontend)                         | Hobby / Free Plan (sufficient for current traffic)                    | \$0 / month  | ₹0 / month          |
| Render   | Hosts the server that powers forms, logins, and admin actions (backend) | Starter Instance (always-on, no downtime)                             | \$7 / month  | ≈ ₹670 / month      |
| Supabase | Database + file/image storage, daily backups                            | Pro Plan (required for production use — no auto-pause, daily backups) | \$25 / month | ≈ ₹2,400 / month    |

\* Vercel Pro is not included currently, as the website's traffic and usage are well within the free (Hobby) plan's limits — it will be added once traffic/enrolments scale up.

|     |                                      |
|-----|--------------------------------------|
|     | Total estimated monthly hosting cost |
| USD | \$32 / month (≈ ₹3100 / month)       |

## 2.2 Why the Render & Supabase free plans are not enough (and when Vercel will need to upgrade)

- Vercel's free ("Hobby") plan is being used for now, since current visitor numbers are well within its limits — this keeps hosting cost at \$0/month. Note: Vercel's Hobby terms are intended for personal, non-commercial use, so once the site is generating regular enrolments/revenue at scale, it should move to the paid Pro plan (\$20/month) to stay within Vercel's commercial-use terms and get production-grade support.
- Render's free web service "spins down" after 15 minutes of no visitors and takes about a minute to wake up again — visitors would see a slow or broken site. The paid Starter plan keeps the site always-on.
- Supabase's free database pauses automatically after 7 days of inactivity and has no daily backups — unacceptable for storing real student and payment data. The Pro plan keeps the database always-on with backups.

## 2.3 When costs can increase

These are starting/entry costs. Each provider charges a little more automatically if usage grows beyond the included limits — this is standard for all cloud platforms, not specific to your project:

- Vercel: moving from the free Hobby plan to the paid Pro plan (+\$20/month) once traffic grows or the site is clearly operating as a commercial/revenue-generating business.
- More website visitors/data transfer than the included quota (Vercel, Supabase).
- A larger database as more students, results, and records are added (Supabase).
- Heavier backend traffic requiring a bigger server tier (Render).

**We recommend reviewing actual usage after 2–3 months live and adjusting plans if needed — this document will be updated accordingly.**

---

## 3. SMS / WhatsApp / Email OTP Cost (MSG91)

---

For OTP-based student login and follow-up notifications, MSG91 (or a similar aggregator) was discussed with the vendor. Based on the vendor call, here is a clear summary of what is required and what it will cost.

### 3.1 What each channel requires

| Channel   | Requirement Before You Can Send Messages                                                                            | One-Time Setup Cost         |
|-----------|---------------------------------------------------------------------------------------------------------------------|-----------------------------|
| SMS (OTP) | DLT registration with a telecom operator: sender ID (PEID), approved sender header, and approved message templates. | ≈ ₹5,900 (₹5,000 + 18% GST) |

|                              |                                                                                                                                                         |                                                                       |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| WhatsApp (OTP/Notifications) | Meta Business verification, followed by an approximately 30-day WhatsApp “campaign activity” period before authentication/utility messages are allowed. | No fixed one-time fee quoted; verification is free but time-consuming |
| Email (Notifications)        | No special registration; email address validation is recommended to reduce bounces and spam-folder placement.                                           | Included in email plan                                                |

### 3.2 Estimated running cost — SMS

Your current volume is approximately 1,000 SMS/month ( $\approx$  12,000/year). Using the two quoted rates:

| Rate Quoted | Cost per 1,000 SMS/month | Cost per 12,000 SMS/year (incl. 18% GST) |
|-------------|--------------------------|------------------------------------------|
| ₹0.25 / SMS | ₹250/month               | $\approx$ ₹3,540/year                    |

### 3.3 Estimated running cost — WhatsApp

| Item                               | Cost                                                                      |
|------------------------------------|---------------------------------------------------------------------------|
| Platform fee (first 2 months)      | Waived                                                                    |
| Platform fee (from month 3 onward) | ₹500 / month                                                              |
| Per-message (Meta) rate            | Passed through at Meta's rate with no markup — to be confirmed in writing |

### 3.4 Estimated total messaging cost (budgeting range)

| Scenario                                 | Monthly Cost (approx.)                           |
|------------------------------------------|--------------------------------------------------|
| SMS only (DLT approved, no WhatsApp yet) | $\approx$ ₹250/month + one-time ₹5,900 DLT setup |
| SMS + WhatsApp (after month 2)           | $\approx$ ₹750/month + one-time ₹5,900 DLT setup |
| Email (Free tier, current volume)        | ₹0/month                                         |

## Overall Monthly Budget Summary

| Category                                                | Estimated Monthly Cost |
|---------------------------------------------------------|------------------------|
| Website & database hosting (Vercel + Render + Supabase) | ≈ ₹3,100 / month       |
| SMS + WhatsApp messaging (after month 2)                | ≈ ₹750 / month         |
| Email (Free tier at current volume)                     | ₹0 / month             |
| Estimated Total                                         | ≈ ₹3,850 / month       |

- This total does not include the one-time ₹5,900 SMS/DLT setup fee, or any development/design fees for the website itself, which are covered separately.
- Domain name Annual renewal fee for successcodeacademy.in is separate from these monthly hosting costs.
